Comp Date October 2020

BUILDING HIGHLIGHTS

Infiltration Detention Basins

Modular Retaining Walls

Heavy Duty Asphalt

Pre-Engineered Metal Building

Pre-Engineered Metal Panels

Pre-Engineered Metal Roof

Custom Overhead Doors

Radiant Piping Heating

Native Fields Landscaping has been in business for over 10 years servicing the landscape industry. Providing commercial landscape service, landscape installation, snow and ice removal services, urban revitalization, parks and recreation maintenance, it services business and residences in over 5 major NJ counties.

Native Fields partnered with North Creek Construction during the first quarter of 2020 to commence design of the proposed 8,000 SF new construction. This new location in Jefferson would be the new hub for Native Fields to continue its expansion into 2021. The site specific nature of this project demanded many field adjustments and modifications to the proposed design in order to facilitate the requirements of the township while maintaining a working facility for our client.

The pre-engineered building design enabled us to prepare all site conditions in time to construct, erect and complete the building all within a 10 month construction schedule.

Construction also included a major renovation to an existing residence also located on the property that would serve as the new office for Native Fields.
